

## How to add text on photos for your slideshow

Nowadays, more and more people like to take photos about daily life, and share it with family, friends or people around the world through internet. Sometimes people like to share the memory as well as photos, and there are also times people want to make photos with more fun. It can simply be done by just add some text into the photos. Like this one as below:

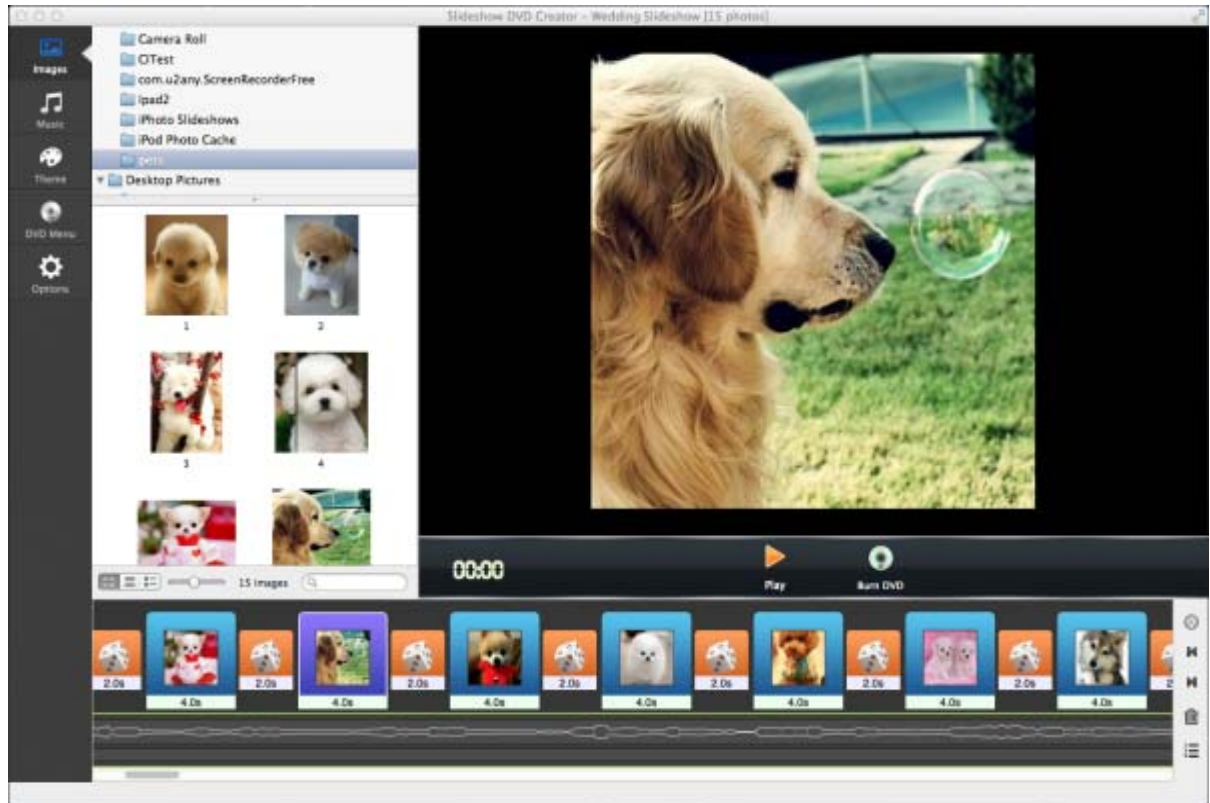

It really very easy to do thing like this, so here I will show you how I add text into photos, and make them into slideshow. The software I am using is [Slideshow DVD Creator](#). Using this soft, you can both make photos into stunning slideshow easily, and add text into the photos.

So please follow me to see how we add text into the photos. First, of course, we download the free slideshow dvd creator from its website :

<http://slideshowdvdcreator.com/>.

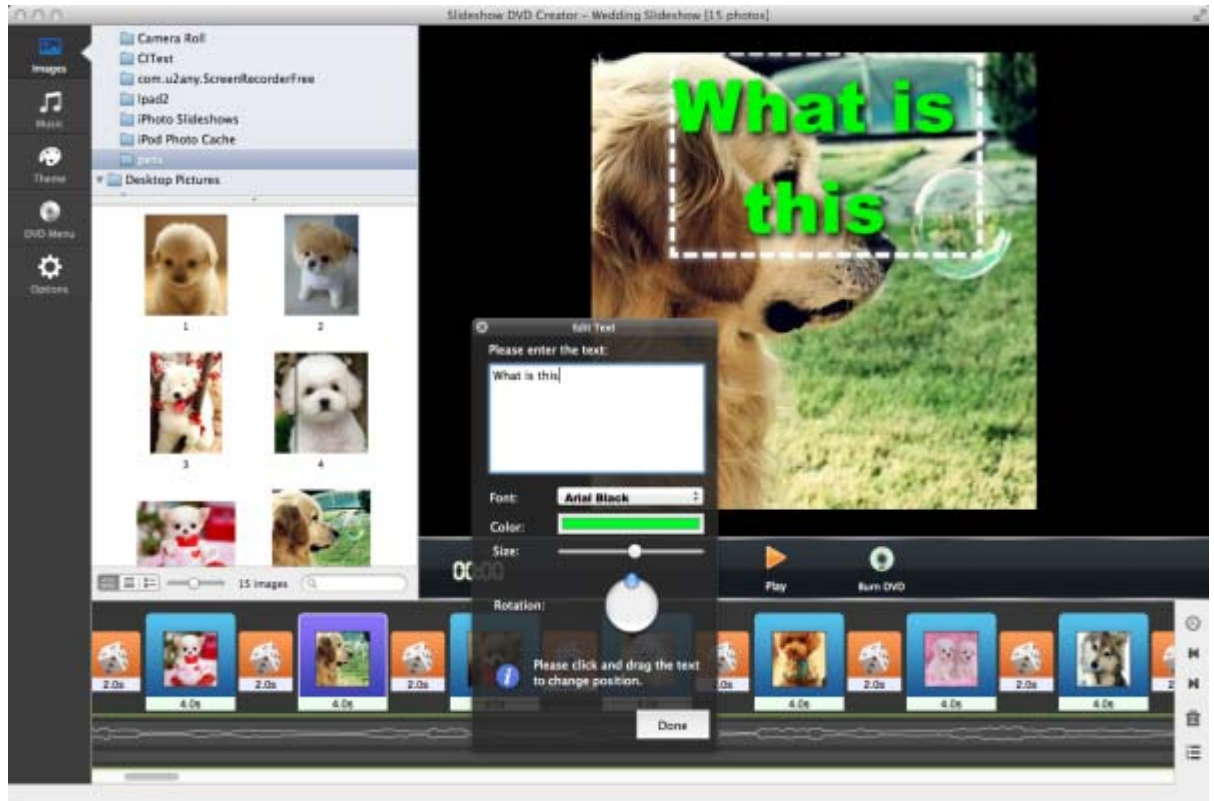

After you install and launch the software, click "[Images](#)" icon in the left panel, then select the folder which contains the photos you want to use. You can drag & drop the photos to add them into the soft. Click the photo you want to add text to, then it will appears in the right panel as below:

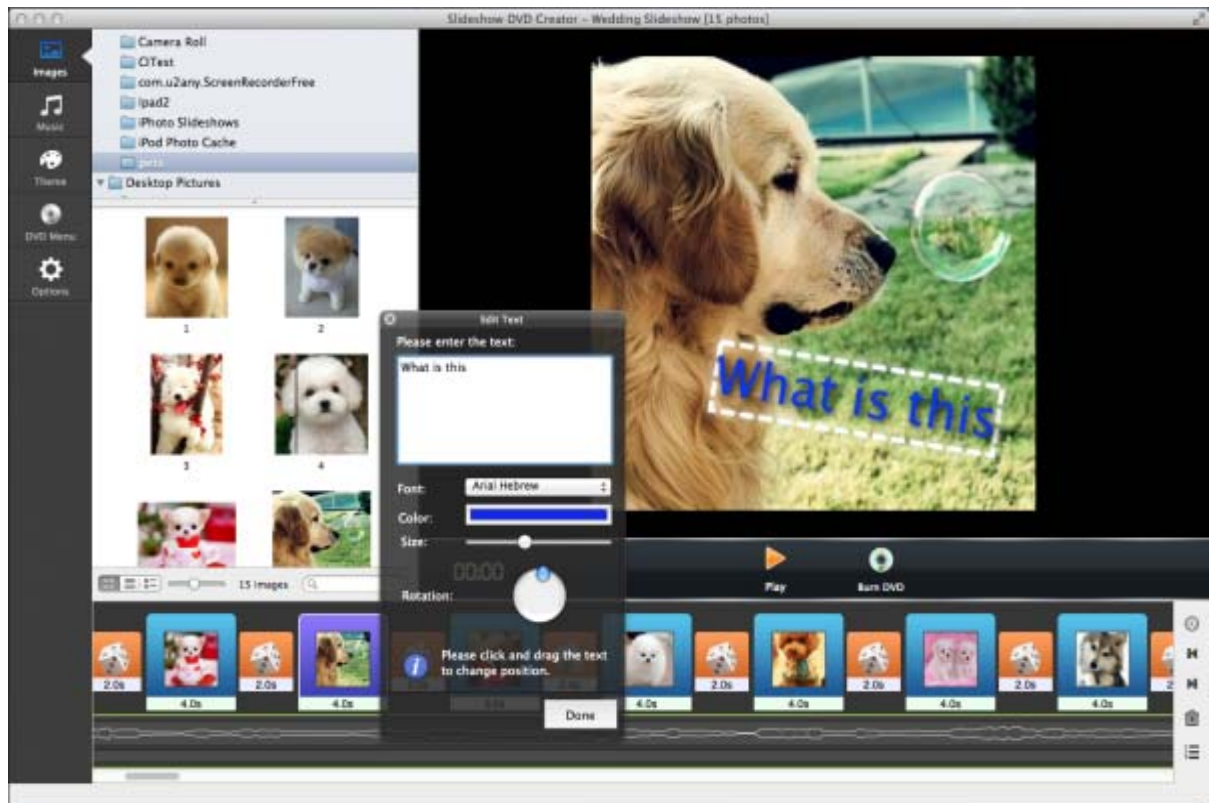

Click "[Slideshow - Add Text](#)" in the Mac menu bar as below, then the 'Edit Text' box will appear:

Shown as below, you can [enter the text into the box](#), then it will appear on the photos. After you finish the text, you can [adjust its font, color, size and the rotation](#).

After finish the adjustment, drag the text to the place where you'd like. And you can also rotate the text a little to make it have more fun.

Now, it's almost done. After you are done with the photos, you can add music into the slideshow, and pick some DVD menu for it, so you can burn it into DVD. Or you can encode it to mov/ mp4 video, so you can enjoy it on your mobile phone device.
